*Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-22 and 31-34, drawn to a method of preparing a protosome containing vaccine, classified in class 424, subclass 206.1.
- II. Claims 23-27, drawn to a method of eliciting an immune response against influenza, classified in class 424, subclass 9.2.
- III. Claims 28-30, drawn to an improved method of preparing proteosomes, classified in class 530, subclass 412.

The inventions are distinct, each from the other because of the following reasons:

Groups I-III are drawn to methods and each is distinct from the other because they utilize different starting materials, therefore the outcomes are not be expected to be the same. Groups I is drawn to a method of preparing a vaccine utilizing an antigen and a proteosome in the formulation of the vaccine. Group II is drawn to a method of eliciting an immune response in a subject, the end product is protection of the subject from the virus. Group III is drawn to a method of preparing a proteosome, the end product is a purified proteosome. Though there may be overlap between these methods in question for groups I-III, each utilizes different materials and therefore the outcome is expected to be different.

Inventions I and II are related as product of making the product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process of vaccination using the product

Art Unit: 1648

formulation of a proteosome can be achieved with a recombinant virus, or another adjuvant formulation.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter which requires different searches of the non-patent literature, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
